Better final fabric quality with the same cut level!

Field study results with **YarnMaster** [®] **PRISMA** show a better final fabric quality, meaning less contamination while keeping the same cut level.

The study took place in India at a Loepfe customer's plant to compare **PRISMA to Uster Quantum 4** on total cut rate and contamination in the final fabric.

PRISMA proves to be the right choice for profitable yarn clearing in the application of **100% cotton yarn Ne 30 combed** produced for the highest requirements.

Better final fabric quality with the same cut level!

1.	Overall summary	3
2.	Study set-up	4
3.	Results on yarn clearers	5
4.	Results on laboratory testing	6

1. Overall summary

Lower cut rate with PRISMA

- 10 % lower total cut rate
- The higher production leads to lower energy costs

Fabric Quality tested in two different external laboratory

- Fabric cleared with PRISMA has a 40 % lower total contamination with PP faults and in the second laboratory 55 % lower total contamination
- Less cuts on winding machine and better fabric quality with PRISMA

Sensors:

• PRISMA DMFP* compared to the Quantum 4 on total cut rate and contamination in final fabric

Location:

Loepfe Customer India

Raw Material

• 100% cotton from India Ne 30 combed

Winder:

• Studies were done on two Schlafhorst ACX6 winding machines side by side with 38 spindles each

Goal:

• Same cuts by better final fabric quality

www.loepfe.com 4

3. Results on yarn clearers

- PRISMA has a **10 % lower** total cut rate
- Consistent cut level shift over shift
- The higher production of PRISMA leads to lower energy costs

4. Results on laboratory testing

Amount of PP faults tested in an external laboratory

- Tested with each 10 kg knitted fabric
- PRISMA has a 40 % lower total contamination with PP faults
- Less cuts on winding machine and better fabric quality with PRISMA

4. Results on laboratory testing

www.loepfe.com 7

Amount of contamination tested in a second external laboratory

- Tested with each 10 kg knitted fabric
- PRISMA has a **55 % lower** total contamination
- Less cuts on the winding machine and better fabric quality with PRISMA
